

used to calculate the so-called endemic equilibrium—which determines whether a disease will continue to exist within a population, simmering constantly in the background or bubbling up seasonally, like influenza.

“That’s the theory of infectious disease control in a single parameter,” Jones said.

That seeming simplicity can make it hard to focus on the complex ways that infectious diseases move through the real world, the researchers said.

“It’s important to highlight that R0 is not simply a function of the pathogen,” Jones said. “It’s a function of the society.” Social and environmental factors like mobility, segregation, and the nature of the built environment help determine rates of infection, he said.

This is one important reason that diseases don’t hit all people the same. Global R0 is an average of very different R0s for different groups of people. Some groups are more likely to interact only with members of their own group, some groups are more likely to come in contact with infected people, and some are more susceptible to the disease for other reasons, Jones said.

In this case, the researchers used mathematical models to help understand the differences in R0 for Black people and white people in Louisiana and to help think about how things would change if racism were less prevalent in America.

Absent those interventions, the researchers noted that Black Americans remain at an elevated and inequitable risk of becoming infected and dying during the COVID-19 pandemic and that this inequity will continue to fuel the pandemic for all Americans.

“Increasing equality would have huge benefits on infection rates for everyone,” said co-author Momin Malik, who was a data science postdoctoral fellow at the Berkman Klein Center for Internet & Society at Harvard University at the time the study was conducted.

This research was supported by the National Institute of General Medical Sciences Models of Infectious Disease Agent Study (grant R01 GM130900), National Institute of Allergy and Infectious Diseases (grant K08 AI139361), National Institute of Minority Health Disparities (grant R01 MD011606), National Science Foundation Division of Social and Economic Sciences (grant 1851845), Institute of Education Sciences (grant R305A190484), and the Ethics and Governance of Artificial Intelligence Fund.

Ms. JACKSON LEE. It states: “Civil rights activists have long called for monetary reparations,” this report opens up. This is a scientific, vetted report from the Harvard University Medical School. It is titled “Anti-Racist Epidemiology: Research suggests reparations for slavery could have reduced COVID-19 infections and deaths in the U.S.” This was published online on February 10.

It says: “To estimate the impact of structural inequities between Black and White individuals, the researchers set out to capture the effect of reparation payments on the Black-White wealth gap in the State of Louisiana.” This is an important report.

“The disproportionate effects of COVID-19 on racial minorities—Black individuals in particular—have been well documented. Black people get COVID-19 at a rate nearly one-and-a-half times higher than that of White people, are hospitalized at a rate nearly four times higher, and are three

times as likely to die from the disease, according to the latest estimates from the U.S. Centers for Disease Control.

“The greater disease burden among Black people has caused tremendous loss of life and unspeakable suffering across these already vulnerable and disadvantaged communities. Notably, these effects have also spilled over and are driving transmission rates of the virus in the overall population.”

They did their study in many places, but I will read a portion. “The study examined the initial period of the outbreak, before infection control measures were implemented, so any differences in infection rates between populations at the time would have been driven mainly by differences in the social structures.”

“Louisiana has a population heavily segregated by race, with Black people having higher levels of overcrowded housing and working jobs that are more likely to expose them,” and they found that if reparations had been given, they would have done better.

I conclude, Mr. Speaker, by just saying that you see a picture of the Tulsa race riot. That is why I stand here today to say that Tulsa Greenwood needs reparation. H.R. 40 needs to pass. Why don’t we do it together?

Mr. Speaker, I yield back the balance of my time.
